P-hydroxybenzoate hydroxylase (EC 1.14.13.2) (4-hydroxybenzoate 3-monooxygenase)
POBA OR PA0247.
                                                                                                                                                                                                                                                                      NATURE 392:353-358 (1998).

-!- FUNCTION: INVOLVED IN THE ASSEMBLY PROCESS OF THE P-RING FORMATION. IT MAY ASSOLATE WHIT FIGG ON THE ROD CONSTITUTING STRUCTURE ESSENTIAL FOR THE P-RING ASSEMBLY OR MAY ACT AS A MODULATOR PROTEIN FOR THE P-RING ASSEMBLY (BY SIMILARITY).

-!- SUBCELLULAR LOCATION: Periplasmic (Probable).

-:- SIMILARITY: Belongs to the figa family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SEQUENCE FROM N.A.

-!-FUNCTION: Elliminates the production of nonsense-containing RNAs (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (Potential).
-!- SIMILARITY: Belongs to the DNA2/NAM7 helicase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          "Annotation of the Drosophila melanogaster euchromatic genome: a

Meguirement of Hos2 histone deacetylase for gene activity in yeast.";
Science 298:1412-1414 (2002).
I. FUNCTION: Responsible for the deacetylation of lysine residues on
the N-terminal part of the core histones (HiZA, HiZB, H3 and H4). In
contrast to other histone deacetylase proteins, which give a tag
for epigenetic repression, it is apparently involved in
transcriptional activation.

"The sequence of a 24,152 bp segment from the left arm of chromosome XIV from Saccharomyces cerevisiae between the BNI1 and the POL2
-!- SUBUNIT: Identified in a Set3C complex with SET3, HST1, SNT1, ST2, CRST1 and HOS4/YIL112W.
-!- SUBCELLULAR LOCATION: Nuclear.
-!- SIMILARITY: Belongs to the histone deacetylase family. Subfamily

-!- SUBCELLULAR LOCATION: Type I membrane protein. Brush border.
-!- TISSUB SPECIFICITY: Intestine.
-!- DOMAIN: THE SEQUENCE EXHIBITS 4 REGIONS (I-IV) OF INTERNAL HOMOLOGY; THEREFORE LPH MIGHT HAVE EVOLUED BY TWO CYCLES OF PARTIAL GENE DUPLICATION. "Analysis of three 2,3-dihydroxybiphenyl 1,2-dioxygenases found in Rhodococcus globerulus P6. Identification of a new family of extradiol dioxygenases.

J. Biol. Chem. 269:7807-7815(1994).
                                                                                                                                                                                                                -!- COFACTOR: Ferrous ion.
-!- PATHWAY: Toluene degradation; third step.
-!- SUBUNIT: Homooctamer.
-!- SIMILARITY: Belongs to the extradiol ring-cleavage dioxygenase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;

New factor IX/factor IXa antibodies and their derivatives useful for increasing amidolytic activity of factor IXa, and for treating blood coagulation disorders such as hemophilia A and hemorrhagic diathesis.

Claim 7; Page 74; 138pp; English.

The present sequence is that of complementarity determining region 3 (CDR3) of the heavy chain of an antibody expressed by mouse hybridoma 193/AD3. This antibody has anti-factor if (FIX) or anti-activated Factor IX (FIXA) activity. It is an example of anti-FIX/FIXA antibodies of the invention. Such antibodies and their derivatives (including those that comprise the present CDR3 peptide) have Factor VIIIa (FVIIIa) cofactor activity or FIXA activating activity. Administration of the antibodies or their derivatives leads to an increase in the procoagulant activity of FIXA, even in the presence of FVIII ainhibitors. This allows for rapid blood coagulation even in the absence of FVIII or FVIIIa, and in the case of FVIII inhibitor patients. The antibodies or their derivatives are used

The present sequence is that of a single chain FV (scFV) derivative of antibody 193/AD3, comprising the heavy (VH) and light (VL) chain variable regions of 193/AD3 joined by an artificial, flexible linker peptide. The scFV was obtained by PCR amplification of CDNAs for 193/AD3 WH and VL regions and cloning in vector pDAP2. 193/AD3 is an example of anti-human Factor IX (FIXA) activated Factor IX (FIXA) antibodies of the invention. Anti-FIX/FIXA and their derivatives, including scFV and CDR3 fragments, have Factor VIIIa (FVIIIa) cofactor activity or FIXa activating activity. Administration leads to an increase in the procoagulant activity of FIXa,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New factor IX/factor IXa antibodies and their derivatives useful for increasing amidolytic activity of factor IXa, and for treating blood coagulation disorders such as hemophilia A and hemorrhagic diathesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Factor IX; FIX; Factor IXa; FIXa; scFv; antibody; procoagulant; Factor VIII cofactor; blood coagulation disorder; haemophilia A; haemorrhagic diathesis; haemostatic; amidolytic; therapy; mouse.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is that of complementarity determining region 3 (CDR3) of an antibody having anti-Factor IX (FIX) or anti-activated Factor IX (FIX3) activity. Such antibodies and their derivatives (including those that comprise the present CDR3 peptide) have Factor Administration of the antibodies or their derivatives leads to an increase in the proceagulant activity of FIXa, even in the presence of FVIII inhibitors. This allows for rapid blood coagulation even in the absence of FVIII in FVIIIa, and in the case of FVIII inhibitor patients. The antibodies or their derivatives are used in a claimed pharmaceutical composition for treating patients with blood coagulation disorders,
  in a claimed pharmaceutical composition for treating patients with blood coagulation disorders, especially haemophilia A and haemorrhagic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New factor IX/factor IXa antibodies and their derivatives useful for increasing amidolytic activity of factor IXa, and for treating blood coagulation disorders such as hemophilia A and hemorrhagic diathesis.

                                                                                                                                                                                                                                      The invention relates to an isolated polynuclectide, which encodes a fatty acid COA ligase-like AMP-binding enzyme (FACILABE) polypeptide. The FACILABE polynuclectide and polypeptide are useful for identifying test compounds, which may act as agonists or antagonists at the receptor site and which can be regulated to provide therapeutic effects. The vectors compounds, which may act as agonists or antagonists at the receptor site and which can be regulated to provide therapeutic effects. The vectors compounds, which may act as agonists or eagents are useful for modulating the activity of FACILABE in a disease, e.g. obesity, diabetes, a central nervous system disorder, a gastrointestinal disorder, cancer, a cardiovascular disorder, a genitourinary disorder. These diseases include Alzheimer's disease, Parkinson's disease, pain, colon tumor, presophageal dysphagia, gastritis, ulcers, lymphoma, Kaposi's sarcoma, urinary incontinence, pelvic pain, lupus nephritis, erectile dysfunction, ovary tumour, lung tumour, thyroid tumour, carcinoma, congestive heart failure, myocardial infarction, is chaemia, and hypertensive vascular diseases. These are also useful for preventing or ameliorating the above

                                                                                                                                                                                                                                                                                                                                                                                                         Fatty acid CoA ligase-like AMP-binding enzyme; FACLLABE; neuroprotective; nootropic; antiparkinsonian; gastrointestinal; cardiant; hypotensive; antiulcer; antiinflammatory; cytostatic; cardiovascular; analgesic; anorectic; antidiabetic; immunosuppressive; nephrotropic; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New genes and encoded fatty acid CoA ligase-like AMP-binding enzyme (FACLLABE), useful for identifying modulators of FACLLABE activity, and in gene therapy for treating e.g. Alzheimer's disease, obesity, diabetes or ischemia.
even in the presence of FVIIIa inhibitors. This allows for rapid blood coagulation even in the absence of FVIII or FVIIIa, and in the case of FVIII inhibitor patients. The antibodies and derivatives are used in a claimed pharmaceutical composition for treating patients with blood coagulation disorders, especially haemophilia A and haemorrhagic

(I) has mootropic, neuroprotective, analgesic, antiparkinsonian, haemostatic, antianaemic, immunostimulant, anorectic and antidiabetic, and can be used in gene therapy. (I) polynucleotides and polypeptides can be used for identifying test compounds, that may act as agonists or antagonists at the receptor site and which can be regulated to provide therapeutic effects. Vectors comprising the polynucleotide can be used in the preparation of a medicament for modulating the activity of (I) in a disease, particularly obesity, diabetes, a haematological disorder or a central nervous system (CNS) disorder. In particular, these are useful for treating anaemia, neutropaemia, thrombocytopaenia, Alzheimer's disease, Parkinson's disease putative fatty acid-CoA ligase fadD26 (acyl-CoA synthetase), which is given in comparison with (I) in the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; fatty acid CoA ligase-like AMP-binding enzyme; enzyme; nootropic; neuroprotective; analgesic; antiparkinsonian; haemostatic; antianaemic; immunostimulant; anorectic; antidabetic; gene therapy; obesity; anaemia; diabetes; haematological disorder; central nervous system disorder; neutropaenia; thrombocytopaenia; Alzheimer's disease; pain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New genes and its encoded fatty acid CoA ligase-like AMP-binding enzyme (FACLAMP-BE), useful for identifying modulators of FACLAMP-BE activity, and in gene therapy for treating e.g. obesity, diabetes, anemia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a human fatty acid CoA ligase-like AMP-
                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        tuberculosis putative fatty acid-COA ligase fadD26 SEQ ID NO:4.
                                                                                                                                                                                         ö

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                            Drosophila, developmental biology, cell signalling, insecticide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure, SEQ ID NO 20073; 21pp + Sequence Listing; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 41; DB 4; Length 251

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is given in a specification relating to a method for screening a library of mutants. The method comprises constructing a library of mutants. The method comprises constructing a library with insertions in genes and/or regulatory regions of the carposon associated with a tag. The mutants are identified by transposon associated with a tag. The mutants are identified by transposon associated with a tag. The mutants are identified by treating an individual suffering from a mycobacterial infection. Suspected of being infected with a Mycobacterial infection. Suspected of being infected with a Mycobacterial or identifying been exposed to an infectious Mycobacterium. It is also useful for identifying been exposed isolating mutants of actinomycetales and for identifying compounds that have antibiotic activity. The method is used to identify mutants of microorganisms, preferably an actinomycetales, such as M. tuberculosis, M. Dayae, M. avium, M. intracellulaire and M. tuberculosis, or satuberculosis, that is unable to grow under specific conditions. It is useful in constructing vaccines. The method can be used to screen multiple libraries concurrently. It can screen libraries of different cransposon to produce an attenuated mutant of Mycobacterium tuberculosis transposon to produce an attenuated mutant of Mycobacterium tuberculosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell:cell interactions in higher eukarycees for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLi6176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB5737-ABB72072). The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; open reading frame; ORFX; gene therapy; cancer; cirrhosis; hyperproliferative disorder; psoriasis; benign tumour; haemorrhage; degenerative disorder; osteoarthritis; neurodegenerative disorder; cardiovascular disease; diabetes mellitus; systemic lupus erythematosus; hypertension; hypothyroidism; cholesterol ester storage disease; immune deficiency; immune disorder; infectious disease; autoimmune disorder; rheumatoid arthritis; autoimmune thyroiditis; myasthenia gravis.
                                                                                                                                                                                                                                                                                         New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

The greater invention describes subscant taily putities into the specification). ABN15762 to ABN27252 encode the human ORRX in the specification). ABN15762 to ABN27252 encode the human ORRX associated in the specification). ABN15762 to ABN27252 encode the human ORRX associated disorder in humans, and in the manufacture of a medicament for treating or preventing a pathology associated with ORRX associated disorder. ORRX polymucleotide squences can be used in the manufacture of a medicament for treating a syndrome associated with ORRX associated disorders. ORRX polymucleotide createment of cancer, hyperproliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders related to organ createsis, neurodegenerative disorders, disorders related to organ range disease, various immune disorders, diabetes mallitus, systemic lupus erythematosus, hypertension, hypothyroidism, cholesterol ester storage disease, various immune deficiencies and disorders, infectious diseases, autoimmune disorders such as multiple sclerosis, rheumatoid arthritis, autoimmune inflammatory eye disease. ORRY proteins are also useful for treating burns, incisions, ulcers, for treating osteoporosis, bone degenerative disorders is or periodontal disease, and for gut creption or regeneration and treatment of lung or liver fibrosis, repercision or regeneration and tesament of lung or liver fibrosis, repercision or regeneration and tesament of lung or liver fibrosis, repercise or injury in various tissues and conditions resulting from cytokine damage. NB. The sequence data for this patent did not form mat directly from MIPO at fibrolybublished pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes substantially purified human proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and autoimmune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ..

Monoclonal antibody specific for Bacillus spores, used to detect anthrax.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          gene sequences from antibodies against Bacillus anthracis spores. The antibodies are produced by different hybridomas. The specification describes monoclonal antibodies (especially 196 antibodies) which are highly specific and can discriminate between the spores of the Bacillus family. The antibodies are produced by exposing mice to Bacillus spores. The humoral immune response to Bacillus spores shows a conservation of Vene usage which is distinct for each spore, spetide fragments derived from the antibodies are also capable of binding spores. The monoclonal antibody, and peptide fragments of it, can be used to detect Bacillus spores in a field sample. It is particularly uses for detecting anthrax
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAY43862-75 represent the amino acid sequences of the heavy chain (VH)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid concluded are:

(2) a vector comprising a promoter operably linked to the antisense nucleic acid; (2) an bost cell containing the vector; (3) an isolated polypeptide for its fragment whose expression is inhibited by the antisense antisense nucleic acid; (4) an antibody capable of specifically binding conclideration or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway required for proliferation, or that that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which the test compound that inhibits spended lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a conganism acts; (9) manufacturing an antibiotic; (10) profiling a conganism acts; (9) manufacturing an antibiotic; (10) profiling a product is soversypressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains is proliferation of an organism. The antisense nucleic acids are useful for dentifying proteins or screening for homologous nucleic acids are usefulled for a cellular proliferation of an organism or and candidate moleciules for a required for callular proliferational acids are usefulled and second or the candidate moleciules for a required for a candidate moleciules acids required for a succession or a part or a general and an organism and an organism and an organism and acids are useful for a second or the candidate moleciules acids required for the proper and an organism accided acids required for the proper account or a careening the candidate moleciules acids required for th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           pneumoniae or P. aeruginosa. The present sequence is encoded by one of a target prokaryotic essential genes. Note: The sequence data for this tent did not form part of the printed specification, but was obtained electronic format directly from WIPO at

The present invention provides human breast specific coding sequences and proteins. These are useful for detecting breast lissue and for detecting and treating breast cancer and other breast diseases. The present sequence is a breast specific polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophilar. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72737). The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                            developmental biology; cell signalling; insecticide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; SEQ ID NO 33135; 21pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Score 37; DB 4; Length 258;

                                                                                                                                                                                                                                                                                                        ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                         The invention relates to novel genes and encoded proteins from Staphylococcus aureus. A composition comprising the S. aureus protein, a nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of

This is the amino acid sequence of the cDNA clone Bc1-like (HAICH29), used in the method of the invention. The products of the clone can be used for treating conditions associated with abnormal expression of the polypeptides. They can be used for e.g. treating chronic inflammatory diseases, immunological disorders, autonimmune diseases, inflammatory diseases, various alergies, and as anti-infectious agents. The products can also be used for detection and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated polynucleotides and encoded polypeptides - used to develop products for treating e.g. inflammatory diseases, infections, immunological disorders, autoimmune diseases, allergies or tumours.
                                                                                                                                   Bcl-like (HAICH29); chronic inflammatory disease; allergic reaction; immunological disorder; autoimmune disease; anti-infectious agent.
                                                                                                                                                                                                                                                                                                                                                                                                       Su JY;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

Sequence 32215, Application US/09252991A

Sequence 3215, Application US/09252991A

Patent No. 655175

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.136

CURRENT APPLICATION NUMBER: US 60/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR PELING DATE: 1998-02-18

PRIOR APPLICATION UNMER: US 60/094,190

PRIOR APPLICATION UNMER: US 60/094,190

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

5370721
heat shock protein G62.5 homolog - Salmonella typhimurium (fragment)
NAlternate names: high temperature protein G
C;Species: Salmonella typhimurium
C;Date: 11.Mar-1998 #sequence_revision 17-Apr-1998 #text_change 17-Apr-1998
C;Accession: $370721
R;Qi, S:Y:; ii, Y:; Szyroki, A.; Giles, I.G.; Moir, A.; O'Connor, C.D.
